

AIAA YOUNG PROFESSIONALS SYMPOSIUM

----- Bridging the Gap between Students and Senior Professionals -----

Events

Technical Presentations

Panels

Workshops

Topics

All topic areas in the aerospace field including:

Space Exploration and Environments

Guidance, Navigation and Control

Materials, Structures and Dynamics

Propulsion Systems and

Transportation Architectures

Modeling and Simulation

Aerodynamics and Aeroacoustics

Special Topics

Information

Date: October 20-21, 2016

Duration: Two days

Attendees: Most attendees will be Young Professionals (age 35 and under). Also expecting senior engineering and management attendees from government and industry sectors.

Location: Dynetics Solutions
Complex Huntsville, AL

Website: www.aiaayps-hsv.com

What is it?

While there are technical forums for students and senior professionals in the aerospace community, the AIAA Young Professionals' Symposium is an opportunity specifically geared for young professionals (YPs). This forum will afford YPs the chance to present technical work to the aerospace community while receiving peer review and mentorship at this early career stage. The symposium is organized and hosted by AIAA's Greater Huntsville Section and contains topics and events that are similar to those found in student conferences and national AIAA technical forums.

Why should you go?

Being in the gap between students and senior professionals, YPs often do not have opportunities to publically present their work to a broad audience and network in the broader field. The AIAA Young Professionals' Symposium not only provides aerospace YPs the opportunity to deliver a technical presentation, but also allows them to learn about advances in the broader field and network to develop contacts for future collaborations, helping current YPs become the aerospace experts and leaders of tomorrow.

Who Should Attend?

AIAA is an organization for all technical professionals in the aerospace industry. All science and engineering YPs in the aerospace field are encouraged to attend. This includes but is not limited to aerospace, electrical, mechanical, and software engineers, because today's systems make collaboration between multiple disciplines essential for success.
